

RELIABILITY BUILT INSM

Cut your water use in half!

Imagine a pre-rinse unit that uses less water. Way less water.

Introducing the B-0107-C and B-0108-C high performing, low-flow spray valves, only from T&S. We've harnessed our legendary, top-quality construction and created yet another product designed to beat even the strictest California standards. This time, though, we're using way less water than ever before and cleaning just as fast.

The most efficient spray valves on the market

- B-0107-C and B-0108-C models
- .65 gallons per minute at 60 psi
- 60% less water usage than even EPA-act-compliant valves
- 100,000 gallons per year potential savings*

**Assumptions: 5 hours/day, 365 days/year = 109,500 minutes*
